SUMMARY

Software developer with an electrical-electronics engineering degree, building full-stack web applications in C#/ASP.NET Core, React and SQL at Türkiye's Ministry of Trade. Also supports the ministry's customs transit (NCTS) data operations in Oracle. Ships products end to end outside work: an iPhone game on the App Store, a second awaiting release, and a Unity simulation in development. MSc student in Data Science at Gazi University.

EXPERIENCE

Software Developer (Assistant Trade Expert) Aug 2025 – present

Ministry of Trade, General Directorate of Information Technologies (BTGM) · Ankara

- Modernize the ministry's ETAP and TEKİZ web platforms with React, C#/ASP.NET Core Web API and SQL.
- Build React screens and components, and the ASP.NET Core services, controllers and business logic behind them.
- Design new SQL tables and reshape existing schemas for the redesigned workflows.
- Diagnose and fix production defects, and improve existing features.
- Support customs transit operations under NCTS: write Oracle queries in Toad to trace status and data-consistency problems, and resolve records that stall in the expected flow, working with the General Directorate of Customs.

Engineering Intern Aug – Sep 2022

Koçak Mühendislik · Aksaray

- Supported the engineering team with calculations, technical drawings and site visits.

PROJECTS

Don't Spill: Coffee Delivery · iPhone game · live on the App Store 2026

- Designed and shipped a one-touch physics game: hold to accelerate a coffee cart while an over-full cup sloshes with every speed change.
- Built with web technologies wrapped in Capacitor; produced iOS builds from Windows through a cloud build service.
- Launched in October 2026 and shipped the v1.1 update within two weeks; monetized with in-app purchases (tips and costume sets).

One More Passenger · iPhone game · awaiting App Store release 2026

- Physics stacking game: a crane swings passengers over a rocking ferry, and every landing shifts the balance.

From Flip-Flops to Atari · Unity (C#) simulation game In development

- Educational game where players build a computer from logic gates up to a working console, packaging each circuit as a reusable module.
- Runs on a pure-C# deterministic simulation engine kept separate from the Unity front end.

Educational YouTube channels · Automated production pipelines 2026

- Two channels (computer internals, worked circuit-analysis problems) whose scripting, narration, rendering and publishing run as scheduled jobs.

NLP e-commerce chatbot · Python · Flask · scikit-learn · spaCy · NLTK

- Chatbot for an online clothing store: Naive Bayes intent classification, plus two spaCy NER models and rule-based color detection to extract product, size and color.

SKILLS

Languages	C#, JavaScript, Python, SQL, C++, MATLAB
Backend	ASP.NET Core Web API, .NET, REST APIs
Frontend and mobile	React, HTML/CSS, Capacitor, iOS App Store publishing (TestFlight, in-app purchases)
Data	Oracle (Toad), SQL schema design, pandas, scikit-learn, spaCy, NLTK
Game development	Unity (C#)
Tools	Git/GitHub, Visual Studio, VS Code, AI-assisted development (Claude Code)

EDUCATION

MSc, Data Science · Gazi University Feb 2026 – present

BSc, Electrical-Electronics Engineering · Ankara University 2023

LANGUAGES

English Advanced (YDS 93.75/100, 2024)
